

Mack® Pinnacle™ Sleeper Series

Trucks with a long list of advances so you can conquer an endless highway.

The Mack Pinnacle Sleeper Series represents a new high in truck engineering. From a lighter-yet-stronger frame — specially designed for life on the road — and a powerful-yet-highly-efficient engine to a cockpit and sleeper cabin that promote unmatched comfort, the Mack Pinnacle puts high technology to work to help you boost profits.

A family that loves life on the road.

The Mack Pinnacle Sleeper Series has a tractor designed for your application. There's a 48" and 56" flat-top, a 60" and 70" mid-rise and a 70" high-rise sporting a 112" BBC. All of them are spacious and packed with amenities to help drivers stay comfortable.

Pedals positioned to help you travel less.

The accelerator and brake pedals are suspended above the cab floor and mounted in-line to save energy when braking and accelerating. The clutch pedal is air-assist, lowering the pedal and greatly reducing effort. All to help drivers conserve energy and work more productively.

Co-Pilot™: Guiding you toward greater profitability.

Pinnacle features Mack's optional new Co-Pilot cluster driver display. Mounted high and centered in the dash for easy reading, this large display sets the industry standard. Drivers can easily toggle through a four-button steering-column stalk. This innovative display has 50 screens that provide real-time fuel economy and trip data, detailed maintenance and fault summaries, and supplemental sensor readings. If you want to equip your truck with specialized features like Theft Deterrence, the Mack Fuel Economy Incentive Program, GuardDog™, and Temp-A-Start™ Co-Pilot is required.

A well designed dash is within reach.

Sitting in the driver's seat of the Pinnacle is a lot like sitting in a cockpit. The dash wraps around so all switches and controls are closer to the driver. There's no stretching, so there's less fatigue. Lighting controls can be reached from the ground to facilitate pre-trip inspections. The standard instrument cluster has been enhanced to include integrated gauge warning lamps, an engine oil temperature gauge, a digital voltmeter, plus wiper fluid level and water-in-fuel indicator. A large, easy-to-read, standard driver display features an odometer, maintenance indicator, hour meter, Sweet Spot indicator, ambient temperature gauge and other useful information. It's a high-tech tool that goes a long way to promote efficient driving.

Your visibility has vastly improved.

Good visibility helps with good driving. The driver's seat placement and dash design in the Mack Pinnacle have been optimized to give drivers an exceptional, panoramic view over the sloping hood. The best-in-class cab lighting is designed to let drivers and passengers work without getting in each other's way. Glare is reduced and lighting is better positioned to illuminate key spots in the cab for paperwork, reading and relaxing.

A small army of sleepers to help you conquer the highway.

The Mack Pinnacle has a sleeper to fit every type of comfort level and destination. Our 48" and 56" flat-top models are ideal for overnight hauls or day trips involving long waits. Our 60" and 70" mid-rise are ideal for regional hauling. The 70" high-rise is spacious, features plenty of headroom and helps drivers make long-distance runs comfortably. All of our sleeper models are loaded with amenities like a full-sized mattress to make life on the road easier.

Put the steering wheel where you want it.

A new steering column allows for unrestricted placement. Simply press a foot pedal and the column can be adjusted in an infinite number of positions, within a given range of movement, for optimal comfort. The steering wheel is positioned so drivers have a clear view of the gauges. An optional hardwood-and-leather-trimmed steering wheel is available for drivers who demand the best.

Less vibration with fewer decibels.

Mack uses a lightweight, high-tech sound deadening material to dull the roar of the road. Noise in the cab has been reduced to the level found in most cars. Drivers won't have to fight noise to stay comfortable.

Control the environment (or at least yours).

The Mack Pinnacle is equipped with an advanced heating and cooling system, providing great airflow. The fan is quieter to promote greater driver comfort. Additional heating and cooling controls are in the sleeper cabin for convenience.

Take it with you.

A locking storage compartment under the lift-up bunk conveniently separates truck supplies from personal belongings. A mix of tall closets and smaller cabinets let you neatly store shirts, coats and other important items. A TV and refrigerator are available so drivers can take the comforts of home with them on the road.

These engines are all muscle.

The MackPower™ Engine Series is the heartbeat of the Mack Pinnacle. These engines deliver plenty of horsepower plus great low-end torque. The MP7 has a horsepower range from 325 HP to 405 HP and the MP8 provides 415 HP to 485 HP. Econodyne® and MaxiCruise® engine families cover virtually any highway application. The MP7 features 30,000-mile oil drain intervals and plenty of extras that make servicing a breeze. In short, you'll get all the muscle you need to conquer the road.

Less fuel. More cash flow.

In designing these next-generation engines, we wiped the slate clean. These powerplants allow you to get your work done while balancing fuel efficiency and federal emissions requirements. An advanced combustion system uses a combination of sophisticated software and intelligent fuel injectors that provide exceptional economy. You have horsepower, torque and the efficiency you need to drive profits.

Unexpected comfort.

These top-of-the-line sleepers are the most comfortable tractors on the highway with spacious interiors to make you feel at home. The sleeper features ample cabinetry, including a tall closet to neatly hang shirts and coats with additional storage under the bunk. Equipped with an innerspring mattress, TV/VCR, refrigerator and convenient 12-volt outlets, you have all the amenities you need for rest and relaxation.

Lightweight enough to handle plenty of payload but strong enough to carry your business.

The Mack Pinnacle rides on the Advantage™ chassis. This lightweight yet strong frame can be spec'd to work best with your application. Choose from four rail sizes ranging from 6 mm to 9.5 mm that offer more RBMs and less weight. You can also choose from a variety of Mack engineered crossmembers to help you minimize weight and maximize strength. It's all to help you work at the highest level of productivity possible.

Save fuel with Temp-A-Start™.

Boost your profitability with our optional Temp-a-Start feature. It automatically starts and stops the engine while parked and idling to keep the engine warm, the batteries charged or the sleeper bunk temperature comfortable. It conserves fuel — and money — by reducing continuous engine idling while keeping the truck fully functional.

Turn-on-a-dime maneuverability.

The Advantage chassis gives drivers an improved turning radius to help get out of tight spaces with less hassle. Outside wheel cuts of up to 50 degrees help with maneuverability.

Minimizing maintenance.

A well engineered chassis will save you money. The Advantage chassis features no-maintenance Mack UniMax™ axles that give you trouble-free operation and longer life. Color-coded lines mounted with stand-off brackets and push-to-connect fittings reduce air leaks and provide quick and simple line tracking.

Always stay in touch with drivers.

Pinnacle features Road Connect™ satellite-based communications system. This advanced telematics service provides nationwide real-time, two-way communications between the vehicle and any internet-enabled PC. Services include two-way driver messaging, vehicle GPS, optimum routing, fuel purchase pricing, fuel tax consumption and logged vehicle data transfer. Road Connect has a low initial installation cost and affordable monthly fees so you can stay in touch with your fleet and run more efficiently.

Let GuardDog™ watch over your truck.

GuardDog is an optional, sophisticated preventative maintenance monitor that uses real-time sensors. GuardDog conveniently reduces driver or technician maintenance inspection time. It saves money by insuring your routine maintenance components go their distance and are replaced at the right time. GuardDog tracks engine oil level, engine air filter, senses water-in-fuel and other routine maintenance items. It's extra help to reduce unplanned downtime and boost efficiency.

Boost efficiency by managing power.

Mack improved its power management capabilities to help its trucks operate more efficiently. There's a Smart Idle™ feature that increases engine RPM to recharge the batteries when voltage falls below a given threshold. An optional Mack low-voltage-disconnect (LVD) feature cuts power to the sleeper to help the engine start if power reserves get low. Inverters and shore power are options on the 60" mid-rise and 70" sleepers to make sure drivers have the power to run household appliances and conveniently recharge batteries. These smart features ensure you always have the power you need to keep going.

Driving information.

Electronics offer both drivers and managers a way to boost productivity. The Mack Pinnacle has our time-tested and road-proven Vehicle Management and Control System or V-MAC® IV. This next-generation of advanced electronics gives you greater control of your costs and lets you monitor your tractor and engine better than ever. In addition to over a hundred proven programmable features, V-MAC IV adds a host of new items, including ABS-based tamper detection, integrated starter protection and programmable daytime running light overrides. V-MAC IV electronics comes with DataMax,™ an advanced trip recorder that captures vehicle trip histories, duty cycle information or scheduled maintenance intervals. GuardDog is an option that helps you keep your truck well maintained and minimizes unplanned downtime.

It's easy to see why this is the best display on the road.

Information from the engine and vehicle is routed to a standard Cool Blue™ display centrally located on the instrument cluster for easy viewing while driving. Drivers can instantly see details about a truck's operation. The standard display is a sophisticated tool with plenty of helpful features such as dual trip odometers, engine hour meter, voltmeter and ambient temperature indicator. Drivers will also find indicators for maintenance, electronic faults and engine Sweet Spot — all to ensure the vehicle is running trouble-free and at peak efficiency.

Details that stand out.

With one quick glance at the dash, drivers will notice the interior styling complements the sophisticated technology. The easy-to-clean cab is available in three colors; Slate Gray, Cobalt Blue and Deep Copper, with three trim levels; Genuine, Custom and Grand Touring. Cabs are accented in woodgrain or brushed-nickel. Charcoal, brushed-nickel and burl-wood steering wheel options complete the new look.

Ride to the top in a Pinnacle.

The Mack Pinnacle Sleeper Series was engineered to be comfortable enough to handle long days on the road. Its interior was designed to be a sanctuary for drivers so they could feel as much at home on the road as possible. Technology and comfort have merged to create the greatest highway tractor Mack has ever produced. To find out more, call 1-800-922-MACK to locate a dealer near you.
